

## Fera Science Ltd

### Quality Policy

Fera Science Ltd (Fera) provides expert scientific testing and advisory services to public and private sector customers and research bodies, with a focus on translating research into evidence and science-based products and services. Fera has therefore implemented an overarching Quality Management System that meets the requirements of the standards to which Fera conducts its work. This overarching quality system is designed to meet the requirements of ISO9001:2015, whilst bringing a common approach to the infrastructure that supports services delivery. The more specialised requirements of the quality systems, covering ISO/IEC 17025, ISO 17043, GLP, ISTA and ORETO, are documented within the annexes of this manual.

The senior management team of Fera is committed to ensuring that the requirements of these standards are met and to continually improve the effectiveness and implementation of the quality management system as well as to satisfy all applicable requirements relevant to the business including regulatory, legislative and environmental responsibilities, in addition to those of interested parties.

Fera's management cascades the quality policy, quality objectives and the management system, as documented in this quality manual and its associated documents, to all staff to enable Fera to meet those requirements.

It is recognised that quality is the responsibility of all employees and Line Managers are charged with ensuring the clear communication and understanding of the management system among all their staff.

Fera's Quality Management System is regularly monitored and assessed via the internal audit and reporting process.
