Integrated Crop Management

Average cost per hectare

Integrated Crop Management

Alongside your standard farming practices, investing £180 profit of over £1,800 per hectare

Knowing what fungal pathogens are in your soil and acting accordingly could increase your yield by up to 30%

Correct planting location and rotation could see yield return to 35t/ha

Correct identification of aphids and timing applications of treatments can lower your costs and reduce your risk of virus transition, improving your overall yield
